

## **TYPO3 Backend → Additional Notes**

**[www.jvi.org](http://www.jvi.org)**

- 
- 1. **Help-Page** **[www.jvi.org/?id=help](http://www.jvi.org/?id=help)**

By entering this URL you find a page which explains quickly, how to structure text and which styles were defined to edit content.

This page also shows all training documents ready to download.

## 2. How to change maximum-values of upload data for an individual course

Overall, all courses are limited to 7000 kb.

Not more than 7000 kb of data are uploadable for any course within eCampus.

However: if a course needs more than this, you can change the maximum value:

**Note: this can only be done by Administrators**

1 → in listview click on a course-page

2 → Edit *ext: download-size* (you find this extension under *Template title*)

3 → change the value in the datafield of constants from *maxsize = 7000* to whatever amount you need. If you need eg. 15 MB, change the value to 15000 (which is slightly less than 15 MB)

General Note:

It is **not recommended** to upload single documents which are **bigger than 10MB**.

The screenshot shows the TYPO3 CMS interface. On the left is the 'Web' sidebar with various tools. The main area displays a list of courses. A course page is selected, and its details are shown in the right pane. The 'Template title' section is expanded, showing the 'ext: download-size' field. The 'Constants' section is also expanded, showing the 'plugin.tx\_abaeasydownloads\_pi1.maxsize = 7000' field. Red circles and arrows indicate the steps: 1. Click on a course page in the list view. 2. Edit the 'ext: download-size' field. 3. Change the value in the 'Constants' section.

## 3. If you want to delete a course

Please be aware, that if you delete a course page all uploaded documents from this course will stay on the server.

**You have to delete first all uploaded documents via the interface on the course page (ecampus.jvi.org). Then delete the course page.**

If you don't delete the uploaded documents the server will be – after some time – full with unwanted MBs of data. Litter, that no one can access anymore.

#### 4. How to define the first page after a successful login in eCampus

If you enter your username and password in eCampus you find yourself again on the same page saying, that you are successfully logged into eCampus. This not very elegant but the system doesn't know automatically, where you might want to go.

This is why we have to tell the system, which page a user should be redirected to after a successful login. You have to define this for each usergroup (= one usergroup per course). Otherwise a user stays on the first page.

- 1 → in listview click on *Global User Storage*
- 2 → Click the edit-button a courses usergroup
- 3 → at the very bottom of the page you find the box *Redirect at login to page:*
- 4 → define the first page of the user's course

The screenshot illustrates the steps to configure the redirect page for a user group in the TYPO3 backend. On the left, the 'User' menu is expanded, and 'Global User Storage' is selected (1). The main content area displays a list of users and user groups. The '05IM044' user group is selected, and the edit button is clicked (2). The right sidebar shows the configuration form for 'Website usergroup [19] - 05IM044'. At the bottom of this form, the 'Redirect at login to Page:' field is highlighted (3).
